Revised Tuna Fishery Management Plan

A National Policy for the Management of Vanuatu Tuna Fisheries

Prepared by

Vanuatu Fisheries Department & Pacific Islands Forum Fisheries Agency

August 2014
Secretariat of the Pacific Community cataloguing-in-publication data

Revised Tuna Management Plan: a national policy for the management of Vanuatu tuna fisheries / [produced by] the Vanuatu Department of Fisheries & Pacific Islands Forum Fisheries Agency

1. Tuna fisheries — Vanuatu 2. Tuna fisheries — Management

I. Title II. Vanuatu. Fisheries Division III. Secretariat of Pacific Community

333.956 783

ISBN: 978-982-00-0325-5

This plan was produced by the Vanuatu Department of Fisheries, with technical and financial assistance from the Pacific Islands Forum Fisheries Agency (FFA) and the Secretariat of the Pacific Community (SPC). Appreciation is extended to other government agencies, NGOs and private sector companies in Vanuatu who contributed to the formulation of this document.
EXECUTIVE SUMMARY

Objectives

The Tuna Fishery Management Plan has been developed to meet four key objectives:

✓ To ensure that the exploitation of the tuna resources that are found in and pass through Vanuatu waters is compatible with the sustainability of the stocks throughout their range.
✓ Within the limits of the sustainability objective, to ensure the harvest is taken in a way that maximises the long-term economic and social benefits received by the people of Vanuatu.
✓ To contribute to the food security of ni-Vanuatu.
✓ To meet regional and international responsibilities for tuna management.

Scope

✓ All billfish and highly migratory tuna species, including albacore, yellowfin, bigeye and skipjack.
✓ All other species taken in the course of fishing.
✓ The Tuna Management Plan covers all Vanuatu waters, including the consideration of the area of Vanuatu’s exclusive economic zone around Matthew and Hunter islands.
✓ Vanuatu flagged tuna fishing vessels wherever they fish. The scope also:
  - Extend to all Vanuatu flagged vessels authorise to fish in the high seas and license to fish in other EEZs within the WCPO.
  - Extend to all Vanuatu flagged vessels fishing in other RFMO convention areas.
✓ All major fishing gears covered under this Plan are primarily longline, purse seine and pole-and-line.
APPROVAL OF THE REVISED TUNA FISHERY MANAGEMENT PLAN

The Revised Tuna Fishery Management Plan is made in accordance with Part 4, Section 11 of the Fisheries Act No. 10 of 2014, is hereby approved on this date.

COMMENCEMENT DATE

By virtue of powers conferred upon the Minister responsible for Fisheries, under Sections 6(1), 10(1) and 11(5) of the Fisheries Act No. 10 of 2014, Notice is hereby given that implementation of this Revised Tuna Management Plan will commence on 29th day of August, 2014.

Honourable David TOSUL (MP)
Minister Responsible for Fisheries

GUIDE TO THE TUNA MANAGEMENT PLAN

The Vanuatu Tuna Fishery Management Plan is a working living document that provides specific strategic direction and guidance to managers and policy-makers while being linked to a clear set of objectives and principles. To meet these needs, the Plan has the following key sections:

Executive summary
A brief summary of the key management areas addressed in the Plan.

Introduction
An introduction to the Plan, why it has been developed, and the scope of its coverage.

Policy framework
A statement of the Plan's overarching objectives, the goals that have been developed to move towards those objectives, and the strategic policy interventions that describe how these goals will be met.

Administrative framework for tuna management
Strategic and coherent actions and policies that will provide the necessary administrative and management structure to allow the Plan to be implemented.

Strategies for conservation and management
Strategic and coherent actions and policies that focus on managing fishing vessels and the sustainable conservation and management of tuna stocks.

Strategies for local tuna fishery development
Strategic and coherent actions and policies that focus on ways in which local tuna fisheries and associated activities can be encouraged and sustainably developed.

Schedules
Specific details on licensing, including fees and management limits. These are placed in a separate Schedule so that they can be updated easily and incorporated in regulations without requiring the whole Plan to be formally amended.

Appendices
A collection of materials that support the Plan, including historical, biological and regulatory
background information; and specific guidance on ways of implementing the Plan to maximize the likelihood of meeting its ultimate goals and objectives.
DEFINITIONS

For purposes of this Tuna Fishery Management Plan, the following terms have been defined, consistent with the Fisheries Act No. 10 of 2014, as follows:

**Subsistence fishing**
Fishing by indigenous inhabitants in Vanuatu waters where they are entitled by custom or law to fish, where the fish are taken in a manner that, as regards the vessel, the equipment and the method used, is in accordance with their customary traditions. Fish are taken primarily for household consumption.

**Artisanal fishing**
Fishing by customary resource owners in Vanuatu where they are entitled by custom or law to fish, where:
- a) the fish are taken in a manner that, as regards the vessel, the equipment and the method used, is in accordance with their customary traditions or is small-scale and individually operated; and
- b) the fish are taken for household consumption, barter, or domestic market trade.

**Bycatch**
Catch of non-target associated species

**Game/Sport fishing vessel**
Fishing for a reward or profit for the purposes of game or sport and includes the hire, charter, or use of a vessel for such purposes

**Recreational fishing**
Fishing done for leisure and without regard to earnings and profit.

**Commercial fishing**
Any fishing resulting in, or intended or appearing to result in, the sale or trade of any fish that may be taken, caught or harvested during the fishing operations, but does not include recreational fishing.

**Exploratory and test fishing**
Any fishing operations undertaken over a limited period of time for the purposes of testing the feasibility of commercial fishing operations with a view to establishing fishery operations based in Vanuatu or the region.

**Exclusive economic zone**
The area described as the exclusive economic zone under the Maritime Zones Act No. 6 of 2010.

**Fishing category**
One of the seven categories of fishing:
- A. Tuna longline;
- B. Tuna purse-seine;
- C. Tuna pole-and-line;
- D. Other types of fishing, including trolling, vertical longlining and other small-scale local fishing techniques;
- E. Game/charter sport fishing.
G. Research fishing; and
H. Exploratory and test fishing.

**Foreign fishing vessel**

Any fishing vessel other than a local fishing vessel, and include any vessel in support of a foreign fishing vessel.

**Highly migratory tuna and tuna like species**

All tuna species specified under Annex I of the Law of the Sea Convention, 1982, including:
- albacore, *Thunnus alalunga*
- yellowfin tuna, *Thunnus albacares*
- bigeye tuna, *Thunnus obesus*
- skipjack, *Katsuwonus pelamis*.

All billfish species, including:
- southwest Pacific swordfish, *Xiphius gladius*
- striped marlin, *Tetrapturus audax*
- blue marlin, *Makaira nigricans*
- black marlin, *Makaira indica*.

And any other species that may be determined by the Commission for the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific.

**Deep-bottom fish**

Includes all deep-bottom fish families of the Lutjanidae (subfamilies Etelinae, Lutjaninae and Apsilinae), Serranidae (subfamily Epinephelinae) and Lethrinidae.

**Local fishing vessel**

Means any fishing vessel:
- a) wholly owned and controlled by one or more natural persons who are citizens of Vanuatu or entitled by law to permanently reside in Vanuatu; or
- b) wholly owned by any corporation or body established by or under any law of Vanuatu, all shares of which are beneficially owned by one or more natural persons who are citizens of Vanuatu or entitled by law to permanently reside in Vanuatu; or
- c) wholly owned by the Government of Vanuatu or by any public corporation or body established by or under any law of Vanuatu, all shares of which are beneficially owned by the Government of Vanuatu.

**Locally based foreign fishing vessel**

Means:
- a) any foreign fishing vessel based in Vanuatu that lands all its catch in Vanuatu; or
- b) any foreign fishing vessel based in another South Pacific country and jointly operated by or on behalf of the Government of Vanuatu and one or more governments in the South Pacific region under an agreement to which the Government of Vanuatu is a party; or
- c) a foreign fishing vessel fully owned and operated by a person or persons who are not citizens of Vanuatu, which is chartered by a person or persons who are citizens of Vanuatu to fish in Vanuatu and land all its catch in Vanuatu.

**Longline tuna fishing**

Fishing for tuna (particularly yellowfin, bigeye and albacore) with many baited hooks attached to a horizontal mainline.
Observer
Any person authorized to act as observer under Section 113 of the Fisheries Act No.1 of 2014, and any person designated in accordance with an access or related agreement to act as observer on board a vessel licensed under an access agreement.

Operator
Any person who is in charge of or who directs or controls a vessel, and includes the master, owner and charterer.

Pelagic drift net fishing
Fishing with a gill net or other net, or a combination of nets that is more than 2.5 kilometres in length, the purpose of which is to ensnare, entrap or entangle pelagic fish by drifting on the surface of, or in the water.

Pole-and-line tuna fishing
Tuna fishing using a combination of barbless unbaited hooks, live free-swimming bait and water sprays.

Purse-seine tuna fishing
Tuna fishing using a large encircling purse-seine net.

Regional Register
The Regional Register of Foreign Fishing Vessels maintained by the Pacific Islands Forum Fisheries Agency.

Research fishing
The use of new fishing techniques not historically used in Vanuatu, or true scientific research. Research fishing status would not be granted to anyone using standard techniques covered by the other fishing category definitions.

Small-scale local fishing
Simple fishing techniques, including droplining, vertical longlining, trolling, mid-water handlining, and spear fishing.

Telex reports
Information provided by a fishing vessel in a standard format on the total catch on board by species, number of days fished, and location, when the vessel enters and exits the EEZ and on each Wednesday in the EEZ.

Transshipment
Transferring any fish or fish products to or from any vessel.

Vessel category
One of the three vessel ownership categories:
1. Local fishing vessels;
2. Locally based foreign fishing vessels; and
3. Foreign fishing vessels.

Vessel length
Defined as the overall length of the vessel from the farthest forward point to the farthest aft. When a vessel measurement is not a complete meter measurement, the next higher meter length applies (e.g., a vessel of 9.1 m length would be considered a 10.0 m vessel for licensing fees).

**Vessel monitoring system**

The system employed by Pacific Island States and coordinated by the Pacific Islands Forum Fisheries Agency to monitor the position and activities of fishing vessels for the purposes of effectively managing fisheries.

**Vanuatu waters**

The waters of the exclusive economic zone, the territorial sea, the archipelagic waters, and the internal waters as defined in the Maritime Zones Act No. 6 of 2010 and any other waters over which Vanuatu claims jurisdiction under international law.

1 Introduction

1.1 Origins and development

The requirement for fishery management plans to be developed and maintained is described under Sections 10 and 11 of the Fisheries Act No.10 of 2014. These elements under the Act are well captured in the process of reviewing this Tuna Fishery Management Plan (hereafter referred to as Plan). The Plan addresses a number of priority challenges by implementing strategic interventions thereby meeting its four key objectives.

In particular, the Plan focuses on the strategies concerned with improved monitoring, control, surveillance (MCS) and licensing systems with a particular emphasis on foreign vessels; managing Vanuatu flagged vessels; and strengthening linkages between organizations with common interests; maintaining catches and efforts within limits set under this Plan; minimize or avoid incidental catch of vulnerable or protected species incl. seabirds, sea turtles, sharks and other mammals. This Plan also addresses the need to both ensure good management of the resource and to examine ways of developing the local fishing industry.

The Fisheries Act requires that the preparation of a management plan involves wide consultation with local fishermen, local authorities, other persons affected by the Plan, government ministries or departments affected by the Plan, and fisheries management authorities of other states in the region sharing the same or interrelated stocks.

The broad consultation required by the Fisheries Act has been carried out in the review process of the Plan through a combination of focus meetings, public meetings, and interviews with a wide range of concerned parties. The review was funded jointly by the Vanuatu Fisheries Department and the Pacific Islands Forum Fisheries Agency.

1.2 Purpose

Consistent with the Fisheries Act No. 10 of 2014, this Plan:

- Identifies the fishery and assesses the present state of its exploitation;
- Specifies the objectives to be achieved in managing the fishery; and
- Specifies the management, conservation, development and technical measures to be taken, in particular the:
  - licensing programme for all commercial fishing vessels to be followed;
  - limitations to be applied to fishing operations;
  - total allowable catch (TAC) for foreign fishing, locally based foreign, local and sport fishing vessels;
  - identifying and assessing development potentials;
  - ensure development of potential fisheries based products are complying to both national and international seafood requirements and regulations; and
  - monitoring, surveillance and control, and enforcement programmes.
More specifically, the purpose of the Plan is to:

✓ provide a clear statement of objectives and direction for managing and developing Vanuatu’s tuna fishing and fisheries;
✓ provide a set of achievable and measurable goals and principles that will direct strategic interventions towards the overall objectives;
✓ establish clear and transparent rules for licensing, monitoring and regulating tuna fishing activities; and
✓ put in place an administrative framework for ensuring the implementation of the Plan and mechanisms that allow it to be updated as conditions change.

### 1.3 Scope

The scope of the Plan can be summarized as follows:

i. **Species** - All highly migratory tuna and tuna-like species; and all other non-target, associated or dependent species taken in the course of fishing.

ii. **Fishing activities** - Commercial fishing, artisanal fishing, sport/ game fishing, Research fishing, Exploratory and test fishing.

iii. **Fishing methods** - Longlining, Purse seineing, Pole-and-line, Trolling, All other methods of fishing that target tuna and tuna-like pelagic fish, Vertical and horizontal longline fishing for deep-bottom fish.

iv. **Product development** - Looking at potential products that can be developed from tuna and other marine species.

v. **Related activities** - Transshipping, Use of fish aggregating devices (FADs), Bait fishing, Bunkering, Provisioning. All other services relating to the tuna fishery, including on-shore processing and provision of port facilities.
vi. **Areas covered for licensing** - Internal waters for licensing, archipelagic waters, territorial sea, EEZ including those portions around Matthew and Hunter islands.

vii. **Areas covered for management of flagged vessels** - All waters where Vanuatu registered, licensed and flagged fishing vessels fish for highly migratory tuna species. It also includes Vanuatu flagged vessels fishing for tuna in convention areas of the ICCAT, IOTC, IATTC, CCALMR, CCSBT, SPRFMO and WCPFC. Vanuatu has special interest in the effective conservation, management and sustainable use of highly migratory species in the high seas pocket to the east of Vanuatu’s exclusive economic zone (EEZ).

### 2 Policy Framework

#### 2.1 Overarching Objectives

The Plan’s four main objectives are to:

- ensure that the exploitation of tuna resources that are found in and pass through Vanuatu waters is compatible with the sustainability of the stocks throughout their range;
- ensure the harvest of tuna resources maximises the long-term economic and social benefits to the peoples of Vanuatu;
- contribute to the food security of ni-Vanuatu; and
- meet regional and international responsibilities under various tuna related treaties, conventions and agreements which Vanuatu is a member or cooperating non-member.

#### 2.2 Principles

This Plan has five key principles, which provide guidance to the development and implementation of goals and strategic policy interventions.
1. **Equitable distribution of benefits**

Benefits from the tuna fishery will be distributed equitably among the people of Vanuatu, with consideration given to rural/urban and geographic distinctions.

In the short-medium term, an important focus of this Plan is to generate maximum net revenues and other benefits to the people of Vanuatu. The benefits will be largely extracted from imposed access and fishing in Vanuatu waters, fees from Vanuatu flagged vessels fishing for tuna in other jurisdictions while under Vanuatu’s flag, employment opportunities for ni-Vanuatu on fishing vessels and, range of spin-off benefits from onshore facilities and value-adding.

2. **Use of the precautionary principle & best practices**

Best practices and strategic measures will be imposed on Vanuatu tuna fisheries in the absence of data and information. Vanuatu will ensure that:

- Necessary information is collected from tuna fisheries in its waters and from Vanuatu flagged tuna fishing vessels in other waters, and provided to appropriate regional organisations for purposes of stock assessment;
- Necessary management, legal and enforcement tools are in place to enforce catch and effort limits;
- The management system is regularly reviewed to ensure that it can be responsive to changing situations including government policies and state of tuna resources; and
- Processing and value adding comply with best practices and quality standards acceptable to potential markets.

3. **User-pay principle & cost recovery**

The increased level of management of tuna and deep-bottom fisheries that will result from implementing this Plan will require additional financial and human resources. Fishermen who benefit commercially from pelagic and deep-bottom fish resources will be expected to contribute to these increased management costs. This Plan encourages the user-pay principle particularly for the services of the Fisheries Department discharged in the effective conservation, management and development of tuna fishing and fisheries in the country.

4. **Public accountability and transparency**

The government will be accountable to the people of Vanuatu for the sustainable conservation, management and development of tuna fishing and fisheries, and will undertake regular stakeholders’ consultations incl. regular meetings of the Fisheries Management Advisory Council before making major policy decisions. In terms of bilateral, multilateral, regional and joint venture fisheries negotiations the responsible Ministry/Department should report back to Cabinet and the people of Vanuatu on the outcome of the negotiations.
5. Limitation of adverse social and environmental impacts

Special attention will be paid to limit, minimize and avoid any adverse environmental and social impacts resulting from Vanuatu tuna fishing and fisheries. The Plan has a number of strategic interventions such as environmental impacts, including standards set under relevant WCPFC CMMs on bycatch species and general environment.

2.3 Goals

The Department of Fisheries must have:

- **Data & research** - accurate data and research findings to better inform assessment of tuna stocks, exploitation rates, and fishing trends and activities within Vanuatu’s EEZ;
- **Information management** - necessary tools and procedures (e.g. information management systems incl. website and databases, licenses, MCS, licensing terms and conditions, bilateral agreements, MOUs for catch landings in ports outside Vanuatu, authorizations to fish in other jurisdictions) for managing all Vanuatu licensed and/or flagged vessels fishing for tuna;
- **Administration & Governance** - an administrative structure that effectively manages the fishery on an ongoing basis and responds to changing circumstances; and
- **Development** - a programme for developing a sustainable local tuna fishing industry. In order to meet the objectives of maximising economic and social benefits to the people of Vanuatu and providing increased food security, the Plan also includes the specific goals of creating the following strategies.

2.4 Strategies

The strategies developed to implement the Plan’s goals are shown in Table 1, which serves as a “roadmap” that allows all parts of the Plan to be traced back to the goals they are based on.

3 Administrative framework for tuna management

3.1 Fisheries Management Advisory Council

The Fisheries Management Advisory Council (FMAC) is established pursuant to Part 3 Section 9 of the Fisheries Act of 2014. The FMAC will be responsible for implementing all aspects of the Plan once it has been approved by the Minister in writing, pursuant to Part 4, Section 11(5) of the Fisheries Act No. 10 of 2014.

This FMAC will cover all aspects of coastal fisheries, aquaculture and oceanic fisheries. It will have an expanded functions and TOR and in pursuant to Part 3, Section 9(2) of the Fisheries Act, No. 10 of 2014, which will be formalised to include recommendations on management and development matters on all fisheries and aquaculture, including setting and
allocations of management limits, and management of licensed fishing vessels in-zone and Vanuatu flag vessels.

Membership of the FMAC, appointments, procedures and related details are provided in Part 3, Section 9 (3) to (10) of the Fisheries Act No. 10 of 2014.

The Council is to meet as often as may be necessary or expedient for the transaction of its business and deal with specific issues. The FMAC will meet to review the Plan’s implementation status. The FMAC will be responsible for:

(i) Making firm rules around decision-making to ensure decisions are subject to informed, independent critique and transparency;
(ii) Having all of its summarised proceedings and decisions placed on the public record, preferably through the new Vanuatu Fisheries website;
(iii) Likely to delegate its workload to sub-committees, such as MCS, etc.
(iv) Ensuring that the Plan is implemented;
(v) Overseeing the management of the Fisheries Management Fund;
(vi) Approving all fishing projects, including rural fisheries projects to be funded by the Fisheries Management Fund;
(vii) Monitoring progress towards the Plan’s goals and objectives;
(viii) Overseeing amendments to the Plan (when those are required); and
(ix) Preparing annual reports that document the state of the tuna fisheries, actions carried out, and progress made towards each of the Plan’s goals.

Key Activities:

(i) Support for the effective work of the FMAC that include management and development matters on all fisheries and aquaculture, setting and allocations of shares, and management of Vanuatu flag vessels;
(ii) Ensuring transparency and stakeholder’s participation in resource allocation and management – develop a fisheries website and prepare freedom of information guidelines;
(iii) Follow through the implementation of the Vanuatu fleet management policy with respect to administrative procedures and guidelines of all Vanuatu flag vessels; and
(iv) Adapt and act appropriately on all elements of the new Fisheries Act No. 10 of 2014 that give legal effect to administrative procedures of all Vanuatu flag vessels.

3.2 Trust Funds

A number of trust fund accounts have been proposed to set up in recent years. However, only one account was endorsed by cabinet, which is the Fisheries Management Fund. Further consultations with Provincial Governments suggest retaining this activity and ensure the funds are used effectively for purposes of management and development of fisheries in the country, and particularly amongst the provinces.

The Fisheries Management Fund is now established and it links directly to all Vanuatu flag vessels where a portion of fees (e.g. license application, access & fishing licenses, vessel registration) from this fleet goes into this Fund. Other sources include portions deducted from license and related fees from all fishing vessels operating within Vanuatu EEZ, authorization and permit fees from Vanuatu flagged fishing vessels, and penalties imposed on vessels for non-compliance.
The Funds will be administered and managed through Vanuatu Flee: Management Policy by the FMAC. The Director of Fisheries will make recommendations to the FMAC on the best uses of these revenues. The Funds shall be used solely to finance activities associated with the Plan, including, but not limited to:

(i) Support the national observer program to gather information and increase compliance;
(ii) Meeting responsibility for Vanuatu flagged tuna fishing vessels around the world;
(iii) Payment of membership contribution to all tuna-RFMOs, which Vanuatu is a member;
(iv) Meeting new requirements for tuna fishery management in relation to the WCPFC;
(v) Improved monitoring and enforcement of foreign, locally based foreign and local fishing vessels;
(vi) Support fishermen associations incl. the establishment of the remaining four provincial fishermen’s associations
(vii) Rural fisheries and aquaculture development programs;
(viii) Support the activities of any government agency involved in fisheries management including the Department of Fisheries and the Police Maritime Wing; and
(ix) Participation at regional and international fisheries related meetings.

**Key Activities:**

(i) Prepare policy guidelines for the sourcing of money into the above established Funds incl. PDF, flagging, license fees and penalties, and other fisheries initiatives. The policy should also include criteria for the utilisation of the Fisheries Management Fund; and
(ii) Explicit deduction of the portions of revenues from licensing, flagging, penalties and other fisheries initiatives to fund fisheries development programmes.

### 3.3 Inter-agencies relationships, coordination & cooperation

There must be close cooperation by the Department of Fisheries with relevant government and non-government agencies in five key areas:

- Monitoring, control, surveillance operations;
- National observer program activities;
- Port sampling activities;
- Compliance and enforcement activities;
- Data collection and provision to the Fisheries Department
- Exchange of fisheries information considered public domain
- Awareness raising and information dissemination

Effective and streamlined communication between core management authorities is essential for the effective management of tuna fisheries. Currently only the Police Maritime Wing has direct link tuna fisheries in the country. Notwithstanding the Vanuatu Maritime Services Ltd and the Vanuatu International Shipping Registry are responsible for the registration of all vessels including fishing vessels that will fly the Vanuatu flag (Sec. 77 of the Fisheries Act No. 10 of 2014). Table 2 below shows some of these important information flows between relevant fisheries related institutions.
<table>

| Department of Fisheries | • Cross checking VMS, logsheet, observer, port sampling and other sources-of-reporting to ensure compliance with reporting requirements  
• Maintaining a database of total tuna catch and bycatch in Vanuatu waters, and of Vanuatu flagged vessels in other jurisdictions  
• Prosecuting all fishing related offenses in Vanuatu waters  
• Operating and managing VMS, Observer and Port Sampling programs  
• Monitoring and managing all Vanuatu flagged fishing vessels  
• Flag state VMS  
• Collecting government fees and fines from foreign and Vanuatu flagged vessels  
• Notification of Vanuatu flagged vessels requesting authorizations  
• Notification of actions taken against foreign flagged fishing vessels  
• Notification of violations that may require action by fishing companies  
• Monthly reports on Vanuatu flagged fishing vessel activities  
• Actions taken against foreign and Vanuatu flagged fishing vessels  
• All direct interactions with foreign flagged vessels operating outside of Vanuatu’s EEZ, including informing them when they are authorized to fish by the Department of Fisheries  
• Maintaining a record of all Vanuatu flagged foreign tuna fishing vessels and their catches and activities  
• List of vessels currently in violation of terms and conditions  | • List of valid licenses always updated for surveillance purposes  
• Notifications of violations that require police involvement or follow up  
• IATFCs for all Vanuatu flagged fishing vessels, including support, bunkers, carrier vessels  
• Information on foreign and Vanuatu flagged fishing vessel operations in Vanuatu’s EEZ  
• Information on requirements and other terms and conditions to be imposed on Vanuatu flagged fishing vessels  
• Information on Vanuatu flagged fishing vessels with IATFCs  |

**Key Activities:**

(i) Develop MOUs to govern critical inter-agency relationships

(ii) Further improve cooperation with other relevant agencies and stakeholders.

✓ This can be done through formal MOUs or participation in established committees and organised forums, making information readily available when requested and seek to publicise outcomes of enforcement activities

(iii) Strengthen cooperation with communities and provincial governments and other authorised officers relative to information exchange thereby increasing visibility in the department’s works in collaboration with other relevant agencies and stakeholders
3.4 Managing the plan

3.4.1 Adoption

Adopting the Plan requires the following steps:

- Recommendation by the Director of Fisheries
- Approval by the Director General of MALFFB
- Approval in writing by the Minister of MALFFB, as required under Part 4, Section 11(5) of the Fisheries Act, No. 10 of 2014.

3.4.2 Evaluation and review

The FMAC is responsible for reviewing the Plan on an annual basis. This annual evaluation process may result in the decision to amend the schedules to the Plan or the Plan itself. There will be also a mid-term review to this Plan.

As part of this annual review the TMAC will ensure that the Plan is:

- Effective in moving towards the stated goals and objectives; and
- Consistent with the principles

A report describing the review of the Plan’s performance will be prepared annually by the Director of Fisheries, and adapt or reflect appropriately in the department annual report, under the supervision of the FMAC and submitted through the Director of Fisheries to the Minister responsible for Fisheries. Table 3 below presents a set of criteria that can be used to evaluate the Plan’s progress.

3.4.3 Amendment

The schedule of fees and management limits can be updated, as required, through the following steps:

- Recommendation of the Director of Fisheries and approval by the FMAC;
- The signature of the Minister responsible for Fisheries; and
- The revised schedules must be published in the Gazette.

Minor amendments to the Plan may be made through this same process, but major amendments to the Plan will require a more detailed review of implications and the same approval process described for the initial adoption of the Plan.

| 22. Duty exemptions on fisheries related developments | Support fisheries development through supportive concessional and tax free policies. | - Duty concession on premix fuel for small scale fishing  
- Duty concession or exemption on fishing gears  
- Duty concession processing and marketing items |
| 23. Information and support for tuna fishery development | Accurate information provided to foreign investment promotion agency and entrepreneurs | Information resources in place and reviewed regularly |
| 24. Legislation to facilitate fish exports | Status of legislation and regulations for health and sanitation | Necessary health and Sanitation laws / regulations in place |
| 25. Ni-Vanuatu crew requirements in license terms and conditions | All flagged and licensed vessels to employ ni-Vanuatu using similar arrangement developed by PNA | - Continue implementation of this activity  
- Impose fee concessions to vessels employing ni-Vanuatu; and, tying such concessions to the number of ni-Vanuatu employed  
- Develop a new condition to tie in all flagged and licensed vessels to employ ni-Vanuatu  
- Up-skill training to crews, officers and engineers level |
| 26. Crew support and training programmes | Number of trained ni-Vanuatu fishermen and crew available | - Undertake regular training and up-skilling of qualified crews  
- Use experienced crews who have been working in fishing vessels as potential trainers  
- Establish refresher training for old crews to keep up with new technological changes in the industry |
| 27. Boat design and construction of small scale surface longline fishing vessel – New project | Support local fishermen/artisanal to upscale their operation to small scale commercial venture and to improve production for food security. | - Develop a design for a suitable small scale L1 vessels that is affordable for the artisanal fishermen  
- There are small boatyard in the country can be utilised to handle this project proper designs available. |
| 28. Development of value added product | Diversifying the local fishermen income generating capacity through value added products developed from tuna and bycatch. | - Provide import substitutes for snack food  
- Link these products with local and overseas markets |
| 29. Large scale onshore tuna processing – New project | Maximise social and economic benefits through the development of onshore processing facilities | - Identify potential development options for tuna processing & value-adding such as tuna poaching if proved viable for Vanuatu  
- Compile information on different types of processing doable and appropriate for Vanuatu  
- Carry our feasibility studies of these development options, and invite expression of interests from potential investors |
3.5 Legal and regulatory issues (incl. capacity within the Fisheries Department and Provincial Governments)

3.5.1 Relationship of the Plan to the Fisheries Act

Part 4, Sections 10 and 11 of the Fisheries Act No.10 of 2014 obligates the development of fisheries management plans. The fisheries management plan must aim to:

(i) identify each fishery and its characteristics, including the present state of its exploitation; and
(ii) specify the objectives to be achieved in the management of the fishery to which it relates; and
(iii) specify the management and development strategies to be adopted for the fishery to which it relates;
(iv) provide for a scheme of licensing, if necessary, or other appropriate management measure;
(v) specify, if applicable, the licensing regime to be applied, including the limitations, if any, to be applied to local fishing operations and the amount of fishing, if any, to be allocated to foreign fishing vessels;
(vi) specify the information and other data required to be provided by persons licensed to fish for that fishery; and
(vii) take into account any relevant traditional fishing methods and practices including traditional management systems and strategies.

Key Activities:

(i) Implement the new organisational structure of the Department of Fisheries and support filling in new positions.
(ii) Support for increasing capacity with provincial governments to support fisheries related works. There was also support to continue training of staffs, explore attachment opportunities and maintain adequate capacity to respond favourably to emerging issues in to the future.
(iii) Increased budgetary support and skilled-staff numbers for a more complex fisheries management environment.
(iv) Prepare a brief policy to rationalise international duty travel amongst fisheries officials.
(v) Support for the involvement of more women in decision-making of Vanuatu fisheries.
(vi) Support for regular review of fisheries policy framework and management plans.
(vii) Review of the open flag registry for fishing vessels in conjunction with the fleet management policy.

3.5.2 EEZ boundaries

In light of the stated policy of the Government of Vanuatu, the Plan includes consideration of tuna fishing activities in all of the declared EEZ, including that portion (230,000 square kilometres) around Mathew and Hunter Islands in accordance to the Maritime Zones Act of 2010.

In order to facilitate resource management and remove ambiguity, the Department of Fisheries will promote the rapid and equitable resolution of EEZ boundaries with Fiji, Solomon Islands, and France (New Caledonia).
4 Strategies for conservation and management

4.1 Management controls

4.1.1 Maximum numbers of licenses

The management limits in the Vanuatu’s EEZ longline fishery are been revised in consideration of the bio-economic analyses, which focus on determining the level of fishing efforts that maximises economic rent. On this basis, there shall be no more than 70 fishing licenses each calendar year allowed under Vanuatu EEZ longline fishery.

A fishing license for which tuna or tuna like species are a target may only be issued if issuing that license will not increase the number of active fishing licenses above the maximum for that fishing category. When more licenses are applied for than are available, they will be allocated according to the following scheme:

(i) The priority scheme for allocating licenses between vessel categories will be: (a) first priority to local fishing vessels; (b) second priority to locally based foreign fishing vessels; and (c) third priority to foreign fishing vessels.

- Any increase in the number of local or locally-based licensed longline vessels would result in a corresponding decline in the number of foreign licences available. For example, if there was an increase of 10 in the number of locally-based foreign vessels the limit of the number of foreign vessels would be reduced to 60.

- The intention is such that there shall be gradual reduction in the number of longline licenses under foreign vessels category. The aim is domesticate the fishery and have all longline fishing in Vanuatu EEZs carried out by local and locally-based foreign vessels.

(ii) The priority scheme for allocating licenses between fishing vessels within a fishing category will be based on a number of factors including: (a) contribution to Vanuatu’s economy associated with the application; (b) previous compliance of the applicant with laws, and agreements, including the provision of information; (c) historical participation of the applicant; and (d) other development aspirations in the fishing and onshore processing sub-sectors.¹

Key Activities:

(i) Restrict the total number of licenses issued so when additional local and locally-based foreign licenses are taken out the total number of licenses issued does not increase above 70. Preferences will be given to domestic and locally-based foreign fishing vessels. And the number of foreign fishing vessels that can be licensed at any given time is 70 less the number of domestic and locally based foreign licenses that are currently valid.

(ii) Review foreign license fees on a regular basis;

(iii) Consider the imposition of additional conditions on all foreign licenses, for example, that all licensed vessels must make a least one port call and one offloading during the licensing period. Such conditions could be made more stringent over time.

(iv) Endeavour to ensure adequate and reliable services and infrastructure in Vanuatu ports that would support activities such as transshipments, offloading to onshore processing facilities and other relevant activities in Vanuatu ports.

¹ A fishing license is linked to a combination of the vessel and the owner. If a vessel is sold and there is a limited number of licenses, then the “right” to the license, based on historical participation, stays with the original vessel owner.
(v) Consider providing concessions on custom duties, port charges and transhipment fees to encourage local basing of vessel and off-loading of catch.

4.1.2 Total allowable catch

The Government of Vanuatu, through the Department of Fisheries and with inputs from FMAC, will determine the TAC for the major species of tuna and tuna like species taken in Vanuatu waters. These TACs will be specified as appropriate in schedules (III.1) to the Plan, regulations or by gazette notice.

The TAC for each species will be used as a guide for determining the number of licenses to issue. The maximum number of licenses will be adjusted as necessary to control future catch levels.

Key Activities:

(vi) Support for the establishment of a minimum benchmark license fee for longline vessels fishing in MSG countries EEZs was expressed to try and ensure that Pacific Island countries are not being played against each other by foreign fishing companies.

4.1.3 Areas closed to fishing

Details of closed areas are contained in the schedules (I.1 and I.2) to the Plan. The following guidelines will be considered in setting closed areas:

(i) Give maximum opportunity to artisanal and smaller local fishing vessels less than 8.0 meters in length;
(ii) Keep larger local fishing vessels (> 8.0 meters) farther offshore;
(iii) Keep locally-based foreign fishing vessels and foreign fishing vessels farther offshore to give local fishing vessels a competitive advantage;
(iv) Protect seamounts and other areas determined to be important to marine diversity and productivity; and
(v) Protect areas designated as marine protected areas and reserves under Section 102 of the Fisheries Act No. 10 of 2014.

4.1.4 Prohibited gear types

Pelagic drift net fishing for tuna and tuna like species will not be permitted in Vanuatu waters and ports pursuant to Part 14 Sections 90 and 91 of the Fisheries Act No. 10 of 2014.

---

2 South Pacific albacore catch limit is that specified under the SC-SPTBF harvest strategy framework
4.2 Licensing framework

4.2.1 Definitions

Definitions used herein are consistent with that of the Fisheries Act No. 10 of 2014.

4.2.2 Categories of Vessel

License fees, terms and conditions, and restrictions on fishing will be determined by the ownership of the vessel (vessel category), the type of fishing (fishing category – local fishing vessels, locally based foreign fishing vessels, and foreign fishing vessels), and the size of the vessel. The terms used in this section are defined at the beginning of the Plan.

4.2.3 Vessels requiring a commercial fishing license

(i) All commercial fishing vessels will be required to obtain a commercial fishing license to fish in Vanuatu waters pursuant to Part 13 of the Fisheries Act No. 10 of 2014;
(ii) Charter sport fishing vessels that sell their catch are considered to be commercial fishing vessels, will be required to obtain a commercial fishing license and will follow the same rules for determining fees and licensing conditions as any other commercial vessel;
(iii) All commercial fishing enterprises are eligible for duty exemption on fuel, fishing gear, and fisheries development-related equipment;
(iv) All artisanal fishing enterprises will require a commercial fishing license; and
(v) Recreational and subsistence fishing will not require a commercial fishing license.

4.2.4 Fishing License fees & Related Charges

License fees are designed to reflect the following

(i) The “rent” or return on the fishery;
(ii) Additional charges that represent the cost of managing the fishery such as fees to support the Observer Programme, VMS Program and Port Sampling Programme, support and develop the domestic fisheries, particularly the rural fisheries sector;
(iii) A fee as guarantee of performance and compliance with license terms and conditions; and
(iv) Onshore process establishment fees, export fees and others.

4.2.4.1 Guidelines for setting fishing license fees

(i) Detailed license fees will be set for the various combinations of vessel category, fishing category, and vessel length in the schedules to the Plan.
(ii) The range of fees in other PICs is also considered to allow some level of harmonization.
(iii) Licenses shall be issued for a period of 12 months and shall not be pro-rated for lesser periods of time except in the research, and exploratory and test fishing categories.
4.2.5 License terms and conditions

Guidelines for the terms and conditions to be applied to different categories of vessels are shown in Table 4. More details on the requirements for observers, information submission, enforcement, and surveillance are covered in Part 19 of the Fisheries Act 2014 (MCS).

The regional MTCs will be adapted appropriately into Vanuatu license MTCs and, ensure close monitoring and compliance of all licensed and authorised fishing vessels.

**Key Activities:**

(i) Adapt appropriately regional MTCs into Vanuatu license MTCs and, ensure compliance of all licensed vessels and authorised vessels.

(ii) Support for the reviewing of licensing system and related processing/ export permits.

(iii) Close annual monitoring of minimum terms and conditions to ensure compliance by all licence and flag vessels.

(iv) Prepare fisheries policy guidelines around negotiations, licensing and access to Vanuatu’s fishery resource.

(v) Undertake a review on Vanuatu licensing framework, which may provide reforms to fishing and fisheries licensing system, which includes:-

- Assessing the application template for licensing, selection criteria and allocation formula in the event of many applications against cap on license and TAC by species.

4.2.6 Research fishing

Proposals for research fishing will be considered from well-known and respected research agencies and organizations, and not for commercial purposes. On the advice of FMAC, the Director of Fisheries may exempt activities carried out as part of an approved research programme from certain standard terms and conditions and other management measures in the fishery.

---

Reasonable efforts will be made to recover discarded fishing gear. (General provisions relating to marine pollution should be consistent with the International Convention for the Prevention of Pollution from Ships, 1973, as modified by the Protocol of 1978 – MARPOL.)</td>
<td></td>
<td>All vessels must observe bycatch management limits and policies specified under this Plan, NPOA (sharks) and WCPFC relevant CMMs on sharks, sea turtles and sea birds.</td>
<td></td>
</tr>
</tbody>
</table>
4.2.7 Exploratory and test fishing

The proponent will be required to submit a detailed proposal in justification of the requested license. The proposal will include:

(i) Reasons for test and anticipated economic benefits for Vanuatu;
(ii) Method(s) of fishing and associated fishing activities, including a full description of gear, deck machinery and technique to be used;
(iii) Area to be fished;
(iv) Proposed dates and duration of fishing;
(v) Target species; and
(vi) Details of vessel(s), including name, registration, measurements, insurance and survey.

Key issues that will be considered by the Director in evaluating proposals for exploratory and test fishing licenses will include:

(i) Whether the proposed activities differ significantly from those already being undertaken, particularly in regard to the proposed target species, fishing method, and area;
(ii) The potential contribution the activity would make to the development of Vanuatu’s tuna and fishing industry;
(iii) The capacity of the existing fishing industry to undertake the proposed activity;
(iv) Whether the proposed activity is consistent with the objectives, goals and principles of the Plan;
(v) Potential interactions with other fisheries;
(vi) Potential for adverse impacts on the status of living resources or the marine environment; and
(vii) The ability of the Department of Fisheries to adequately monitor and supervise the proposed activities.

Additional conditions may be imposed by the Director of Fisheries on licenses in the exploratory and test, and research categories. In general, these will include enhanced reporting requirements, particularly more detailed catch and bycatch data, and economic information. Where possible, full observer coverage will be required.
4.2.8 Related activities

4.2.8.1 Transshipping

Pursuant to Section 104 of the Fisheries Act of 2014, no fish shall be transshipped from a foreign fishing vessel or locally based foreign fishing vessel, into a vessel while in Vanuatu waters except with the permission of the Director of Fisheries at an approved port and in accordance with such conditions as he may specify. All transshipments of catch shall be subject to inspection by authorized officers, including the port sampling officers and observers.

No fish shall be transshipped from a local fishing vessel to a foreign or a locally base foreign reefer or carrier vessel while in Vanuatu waters and outside Vanuatu’s EEZ except with the permission of the Director of Fisheries at an approved port and in accordance with such conditions as he may specify. All transshipments of catch shall be subject to inspection by authorized officers, including port sampling officers and observers.

No fish shall be transshipped to any vessel other than a carrier vessel that is in good standing on the FFA Regional Register and has a valid Carrier License issued by the Department of Fisheries. Details of fees for transshipping are contained in the schedules (IV.6) to the Plan. Reefer/Carriers will be liable for port entry fees as set by the appropriate authorities.

4.2.8.2 Fish aggregating devices (FADs)

The Department of Fisheries will:

(i) Review the National FAD Management Policy and the Vanuatu High Seas FAD Plan;
(ii) Maintain a Register of FADs deployed in Vanuatu waters and submit this to the appropriate national agency in the interests of navigational safety; and
(iii) Collect information on fishing activities around FADs and, if necessary, introduce controls on their use.

Vanuatu flag vessels authorised to fish in the high seas must observe relevant measures on FAD fishing, and the Vanuatu High Seas FAD Plan.

Only local fishing vessels are eligible to fish around FADs. There will be no specific closed area around them for local fishing vessels less than 10 meters and sport fishing vessels. Commercial tuna longline local fishing vessels are not eligible to fish within a radius of 3 kilometres from a FAD.

Measures specific to FADs in all RFMOs will be observed by Vanuatu licensed and flagged fishing vessels.

4.2.8.3 Bait fishing

Bait fishing is not permitted unless specifically noted on the fishing license. Terms and conditions will be set by the Director of Fisheries for each license with due consideration for potential social and environmental impacts.
4.2.8.4 Shark fishing

Shark fishing in Vanuatu waters is reserved only for local fishing vessels pursuant to terms and conditions as may set by the Director of Fisheries and with advice from FMAC. All commercial vessels licensed to fish in Vanuatu waters and Vanuatu flagged vessels elsewhere must comply with specific measures set out in the Vanuatu NPOA on sharks.

4.2.8.5 Discards

All fishing vessels fishing in Vanuatu waters shall retain their fish catch. There shall be no discards of fish and “high grading” from all fishing vessels operating in Vanuatu waters. Vessel operators/owners must ensure specific provisions relevant to bycatch and discards under WCPFC CMMs must be complied with by their vessels.

4.3 Access agreements

Vanuatu has a number of access agreements with both DWFNs and several arrangements through charters with neighbouring Pacific Island countries. These arrangements are consistent with UNCLOS recognising that Vanuatu does not have the capacity to harvest tuna thereby cooperate with other states to fish the surplus. Notwithstanding, Vanuatu will continue to build its domestic fleet and at the same time restructure foreign fleets active in its waters.

Pursuant to Part 10 of the Fisheries Act of 2014, an access agreement or a licence issued under this Part is required prior to the issuance of tuna fishing licenses for all foreign and locally based foreign vessels. Access fishing agreements will be based on a standard template agreement that is maintained by the Department of Fisheries and approved by the Director.

The fishing agreement will clearly define terms and conditions pursuant to Section 81 of the Fisheries Act of 2014, and including but not limited to:

(i) Obligations for the timely provision of logsheet data and associated information on all fishing activities and catches in Vanuatu waters;
(ii) Requirement to accept observers as stipulated under Section 81 of the Fisheries Act of 2014;
(iii) Requirement for all fishing and carrier vessels to carry and operate an FFA approved automatic location communicator (ALC) registered with the FFA VMS Registry;
(v) Permitted target species;
(vi) The definition of areas closed to fishing;
(vii) The definition of approved gear types and fishing methods;
(viii) Requirements to take all reasonable measures, as defined by the Director of Fisheries, to minimize bycatch;
(ix) License fees; and
(x) Penalties for failure to comply with terms and conditions of the agreement.

While access agreements may specify a maximum number of licenses to be issued under the agreement, no license will be reserved or guaranteed under any agreement until it has been paid in full.

Access agreements shall have a maximum duration of 5 years to allow for the amendment of terms and conditions to reflect changing management plans.
The fees to be paid for licenses are described in the schedules (IV.1, IV.2, IV.3 and IV.4) to the Plan and are not negotiable.

Where the number of licenses applied for under various arrangements exceeds the maximum number of licenses available as specified in the schedules (II.1, II.2 and II.3) to the Plan, licenses will be allocated in order of priority as described in the Plan (see Section 4.1). Access agreements may include:

1. “Performance bonds” of US$20,000 is required to be deposited at the beginning of licensing period for compliance under an access agreement.

2. Schedules of additional fees will be charged over and above the fees for individual licenses to reflect administrative and management costs, as follows:-
   - deduct $500 penalty for each delay of > 1-month submitting vessel's logsheet
   - $500 increments for each additional month delay
   - require to replenish performance to original level beginning of each licensing period
   - bond may also be used as a ‘default’ or compensation payment in the event that none of the licenses under a particular agreement are actually taken up
   - for poor history of compliance, the bond may be set at a higher level than for the better-performing fleets

**Key Activities:**

(i) Encourage whole-of-government representation in bilateral negotiations;
(ii) Activate the “performance bonds” for all access agreements; and
(iii) Ensuring transparency and stakeholder’s participation in resource allocation

---

**4.4 Monitoring, control, surveillance and enforcement**

A number of MCS tools and protocols have already been set up within the Fisheries Department in collaboration with Police Maritime Wing, Vanuatu Maritime Authority and other relevant agencies in the country. Collaborations with a number of FFA countries and the FFA Secretariat are continuing in the usual manner. Vanuatu is Party to the Niue Treaty and the Niue Subsidiary Agreement, this year.

**Key Activities:**

**Activity 1. VMS**

(i) Continues monitoring to improve or retain VMS coverage at 100%
(ii) Revise license MTCs to apply sanctions for repeated violation (e.g. non-renewal of license, terminate license, fines)

**Activity 2. Observer**

(i) support for min. 5% observer coverage and closely monitor this possibly through condition of license for vessels active in the EEZ, and condition of authorization of Vanuatu flag vessels in the high seas and areas outside Vanuatu EEZ;
(ii) improve observer coverage for purposes of addressing data gaps and reporting against requirements and activities while engage in fishing in the EEZ

36
target for incremental increase of observer coverage to exceed min. 5% by 2015, 10% by 2017, and 20% by 2020.

(iii) improve cooperation with vessel operators/owners including ensuring compliance with conditions of authorization to fish in high seas and zones outside areas of national jurisdictions;

(iv) close monitoring of Vanuatu national observer program to ensure sufficient and consistent number of skilled observers & de-briefers is maintained

(v) timely update of the WCPFC Secretariat with respect to Vanuatu’s plans of how to achieve 5% coverage;

- e.g. authorization certificate, license MTCs and close liaison with vessel operators/owners

Activity 3. Port Sampling

(i) make available resources in support of the port sampling programme and ensures consistency in high level coverage even when samplers are placed on vessels as observers; and

(ii) maintain priority on port sampling recognizing datasets continue to be vital sources of verification on logsheet and observer reports thereby improving quality and timely provision of catch data.

Activity 4. Logsheet

(i) close monitoring for timely submission of logsheet reporting for vessels active in Vanuatu EEZ

- target at least by > 50% in the next 3-years, 2015-17, and possibly > 70% logsheet reporting for Vanuatu flag vessels next 3-years, 2018-2020;

(ii) trial of electronic reporting on Vanuatu flag vessels and those active in its EEZ; and

(iii) regular reconciliation of logsheet and VMS data with assistance of SPC and FFA.

Activity 5. Aerial/sea patrols

(i) support the continuation of routine aerial/sea patrols and participation in joint regional operations

(ii) improve coordination and liaison between Fisheries Department and Police Maritime Wing (e.g. regular briefings and debriefings)

(iii) make available financial and human resources to support and manage routine patrols

(iv) follow up boarding and inspection workshop for Vanuatu

Activity 6. MCS agreements with neighbouring countries

(i) conclude MCS agreement with Fiji and Solomon Islands

(ii) use all the agreements with neighbouring countries to improve surveillance and enforcement activities and deter suspected IUU activities in Vanuatu EEZ

(iii) support and participate fully in all operations including that of joint regional operations coordinated through the FFA

(iv) make available adequate resources both in the Fisheries Department and Police Maritime Wing in preparation for and during surveillance and enforcement operations

Activity 7. Improve enforcement of terms and conditions

(i) support for the review of fishing license and authorization terms and conditions

(ii) ensure compliance of all registered and licensed vessels to terms and conditions of fishing licenses in the EEZ, and authorization of Vanuatu flag vessels to fish in other jurisdictions

(iii) make available adequate resources committed for surveillance & enforcement of MTCs

(iv) maintain consistency or improvements in support of enforcement and surveillance activities (incl. funding and personnel)

(v) prepare Vanuatu MCS Strategy that draws from the Regional MCS Strategy

(vi) enhance surveillance/enforcement activities incl. info exchange (incl. policies, plans etc.)
Management of Vanuatu flagged vessels

4.5.1 Management Framework

Vanuatu has a Fleet Management Policy and all Vanuatu flag vessels will be managed appropriately in accordance to administrative procedures and requirements for monitoring Vanuatu flagged vessels stipulated under this Policy and other relevant domestic policies and legislations (Part 12 of the Fisheries Act No. 10 of 2014).

The FMAC may carry out regular assessments of the costs, risks and benefits of flagging foreign fishing vessels, and the mechanisms available to ensure compliance with international and regional agreements pursuant to Part 11 of the Fisheries Act of 2014.

In order to ensure that effective measures are put in place to monitor and control the operation of all Vanuatu flagged fishing vessels, the Director of Fisheries or his/her alternate, in addition to powers and responsibilities set out under Part 3 Section 8 of the Fisheries Act of 2014, shall:

(i) participate in regional and international convention meetings with responsibility over convention areas within which the Vanuatu flagged fishing operate;
(ii) require all Vanuatu flagged vessels fishing to have an International Authorization to Fish Certificate (IATFC) issued by the Department of Fisheries pursuant to Section 66 of the Fisheries Act No. 10 of 2014;
(iii) ensure that all IATFCs issued are subjected to conditions outlined under Section 68 of the Fisheries Act No. 10 of 2014;
(iv) ensure that the prescribed fee for the IATFC is payable to the Department of Fisheries prior to issuing the IATFC;
(v) ensure that the operator of a Vanuatu flagged fishing vessel must not undertake fishing or related activities inside and outside of Vanuatu waters without an IATFC;
(vi) pursuant to Section 70 of the Fisheries Act No. 10 of 2014, take appropriate actions where vessels violate the terms and conditions of their IATFCs; and
(vii) ensure that the development interest of all Vanuatu flagged fishing vessels are taken into account when negotiating fishing access agreements with other nations and when discussing management arrangements within all tuna RFMOs.

An IATFC shall include certain terms and conditions relating to:

(i) Accurate and up-to-date data catch reporting;
(ii) Timely submission of catch data logsheets;
(iii) Compliance and enforcement;
(iv) Use of Vanuatu flag state VMS (or similar systems appropriate to the region of activity);
(v) Use of observers;
(vi) Port sampling; and
(vii) Transshipment.

Pursuant to Section 71 of the Fisheries Act No. 10 of 2014, the penalties for fishing without an IATFC, or for violating terms and conditions, shall include:

(i) Fines;
(ii) Revoking IATFC and all relevant permits;
(iii) Restricting or removing fishing privileges;
(iv) Removal from the appropriate registers of fishing vessels such as the Regional Register;
(v) Removal of the right to fly the Vanuatu flag.
There shall be annual fees charged for the issuance of IATFCs by the Department of Fisheries as outlined in the Schedule of this Plan (IV.4).

4.5.2 Responsibilities

The *Fisheries Department* is responsible for:

(i) Activities related to flag state responsibility, including the collection of fisheries related information;
(ii) Keeping a register of all Vanuatu flagged fishing vessels;
(iii) Keeping a VMS register of all Vanuatu flagged fishing vessels;
(iv) Managing the routine collection and management of fisheries-related information from these vessels;
(i) Developing and maintaining the Vanuatu flag state VMS;
(ii) Payment of all IATFCs;
(iii) Collecting revenue owed to the Government of Vanuatu by operators of the Vanuatu flagged fishing vessels; and
(i) Meeting part of the expenses incurred as a result of participating in the meetings of RFMOs by the Vanuatu government delegation.

The Director of Fisheries will develop a standard data requirement for all Vanuatu flagged fishing vessels that is designed to meet the needs of the tuna RFMOs, and fishing treaties, agreements and arrangements to which Vanuatu is a party or active member. This information will include on an ongoing basis:

(i) Vessel operator’s name,
(ii) Vessel owner’s name,
(iii) Target tuna species,
(iv) Allocated catch quota,
(v) Allocated number of fishing days,
(vi) Area of fishing activities, and
(vii) Details (quantities and location) of catches and bycatch.

**Key Activities:**

(i) Following through the implementation of the Vanuatu fleet management policy with respect to administrative procedures and guidelines of all Vanuatu flag vessels;
(ii) Implement amendments contain in the fisheries bill that give legal effect to administrative procedures and guidelines of all Vanuatu flag vessels; and
(iii) Undertake the review of all Vanuatu vessel registries as recommended in the Vanuatu Institutional Strengthening report.

4.6 Regional and international agreements

Vanuatu is a member of all RFMOs and participates 100% in all their meetings. Vanuatu flag vessels fish in all waters of the RFMOs and therefore use the opportunity in these meetings to pursue matters of national interests including that of their flag vessels active in those waters.

**Key Activities:**

(i) Continued participation in RFMOs meetings;
(ii) Periodic review of benefits Vanuatu gain as full member of these RFMOs;
(iii) Strengthen capacity in-country and elsewhere to better manage Vanuatu flag vessels incl. deterring or avoid involving in IUU activities; and
(iv) Continue working on boundary delimitation and possibly conclude EEZ boundary treaties with neighbours in the near future, particularly disputed areas in Matthews and Hunters between Vanuatu and France.

4.7 Management of environmental and social impacts

Measures and procedures relative to minimize environmental and social impacts are already featured in a number of domestic policies and legislations incl. tuna plan and fisheries act and license min. terms and conditions. Vanuatu will observe, as appropriate, measures related to bycatch and marine environment of all RFMOs. Vanuatu completed its Ecosystem Approach to Fisheries Management Report in 2008, which provides the platform for incorporating priority principles and measures in the Tuna Plan plus all other fisheries policies and legislations.

Key Activities:

(i) Prepare and implement NPOA (sharks);
(ii) Implement and comply with all binding provisions of conservation and management measures relative to sharks, sea turtles and sea birds in the WCPO, and binding resolutions in other RFMOs;
(iii) Maintain close liaison with vessel owners and operators to ensure licensed vessels comply with license conditions specific to minimizing environmental and social impacts;
(iv) Review current ecosystem related protocols and measures stipulated in all domestic fisheries policies and legislations; and
(v) Collect and report on bycatch species such as sharks, turtles and birds as required by relevant CMMs, and comply with reporting requirements under the WCPFC and other RFMOs which Vanuatu is a signatory.
5. Strategies for local tuna fishery development

5.1 Options for development

The Plan supports the development of all aspects of the tuna fishing industry including:

**Tuna fishing**
- Small semi-commercial vessels catching tuna and tuna like species around FADs
- Medium size multi-purpose vessels that engage in tuna fishing in addition to other forms of marine harvesting and other maritime activities such as cargo transportation
- Charter sportfishing vessels that may also act as commercial vessels and sell some of their catch to the local market
- The development of a small locally based and owned fleet targeting tuna and focusing on the export market with some local sales
- The development of larger locally based tuna fishing operations where appropriate domestic investment can be found to develop a long-term sustainable operation
- The development of domestic processing operations

**Other tuna and deep-bottom fish related industries**
- Local retail sales and consumption
- Provincial small-scale fish processing facilities
- Provincial fish market outlets
- Small-to large-scale tuna and deep-bottom fish export processing plants
- Maintenance, supply and provisioning of foreign vessels and locally based foreign fishing vessels

**Creation of employment**
- Ni-Vanuatu crew on foreign fishing vessels operating in Vanuatu EEZ;
- Ni-Vanuatu crew on Vanuatu flagged fishing vessels operating inside and outside Vanuatu’s EEZ
- Ni-Vanuatu crew on local and locally based foreign vessels
- Observers and port samplers, and
- Associated service industries

5.2 Development strategies

The National Fishermen’s Association (NFA) now replaces the Fishermen’s Cooperative and the umbrella agreement has been developed to cater for all the six provincial associations. Processing and export permits and related certification require regular review to satisfy required standards.

**Key Activities:**

*Activity 1. Programme funded from fees and penalties*
(i) Channel portion of funds from licensing and other fisheries initiatives through to funds established for the management and development of fisheries in the country
(ii) Support this activity and with agreement on explicit proportions of total annual fees and penalties needed to be extracted for purposes of local fisheries developments

**Activity 2. Funding to support fishermen associations**

(i) Continue to explore establishing the remaining four FCAs incl. current state of fishermen association in Vila under the umbrella association of SHEFA Province.
(ii) Support continued liaison and support for the NFAs and policy considerations at FMAC level.

**Activity 3. Rural fisheries markets**

(i) Ensure a larger portion of catches particularly from vessels active in archipelagic waters not only make available to two fish processing facilities but also supply rural fisheries markets. These efforts would ensure food security (fish sources) in Vanuatu.
(ii) Secure funding to establish the three remaining local markets.

**Activity 4. Rural fishing gear shops**

(i) Secure funding and establish remaining four provincial gear shops.

**Activity 5. Nearshore FAD programme**

(i) Recognize the importance of the programme to support local and small-scale fishing in the provinces.
(ii) Link this activity plus other supports on local markets, gear shops and concessions on fuel, to the collection and reporting of catch data to the Fisheries Department.

**Activity 6. Duty exemptions**

(i) Increase concession on fuel purchased by artisanal and recreational fishermen and operators as incentives to collect and submit catch data.
(ii) Undertake regular assessment of government duties and concessions on fuel and spare parts in support of domestic commercial fisheries development.

**Activity 7. Information and support for fisheries development**

(i) Make available all relevant policies and legislations on the fisheries website.
(ii) Continue to use the Foreign Investment Board and other mechanisms to promote and seek interest to invest in the fishing sector.
(iii) Prepare a fisheries investment strategy in support of fisheries developments.

**Activity 8. Legislation & export permits of fish exports**

(i) Support for the amendments in the Act covering aspects of certification and competent authority. It also supports preparing a regulation on the policy related to certification and competent authority.
(ii) Support for the work of the Competent Authority within the department and to ensure export of Vanuatu fish products meet requirements of potential markets abroad
(iii) Regular review of processing/ export permits and related certification to satisfy required standards.

**Activity 9. ni-Vanuatu crew requirements as license conditions**

A IMPLEMENTATION STRATEGY

The implementation process has been discussed from a structural point of view in the section on the Administrative Framework for Tuna Management (Section 3). This appendix is intended to be a practical guide to implementing the strategies outlined in the Plan, including timing and prioritization.

Priorities for implementation
The initial priorities for action should be focused around setting up the basic mechanisms through which the Plan will operate. These are:

- Adoption of the Plan through approval by the Council of Ministers;
- Ensuring a functional FMAC;
- Ensure that the established Fisheries Development Fund is administered through the guidelines set out in the Vanuatu Fleet Management Policy; and
- Hiring a Tuna Management Coordinator to manage the implementation process.

Once the basic management mechanisms are in place the FMAC and the Director of Fisheries should initiate action on a small number of the strategies with careful regard to the resources available to ensure success. Some of the more important actions that should be initiated early are:

1. In collaboration with the state law office draft the notices and regulations required to be published in the Gazette to give legal power to the elements of the Tuna Management Plan with a particular focus on the table in the Schedules to the Plan and the terms and conditions for different vessel categories;

2. Application of the new licensing terms, conditions, and fee schedules to all new and renewing licenses (following appropriate notification to current license holders) with particular emphasis on VMS for foreign vessels;

3. Input to the revision of Fisheries Act to ensure it is consistent with the Plan; and

4. Strengthen the Observer Programme through contact with FFA to request assistance in setting it up.

With the implementation of the Observer Programme it is recommended that this be initiated at a low level until the logistics of the system have been worked out. Because many foreign vessels do not land in Vanuatu and there are concerns about the cost of flying observers for embarkation or return home, it is important that the new license conditions requiring vessel owners/operators to pay costs are implemented as soon as possible.
B  FISHERIES MANAGEMENT ADVISORY COUNCIL

Pursuant to Fisheries Act No. 10 2014 Section 9:

(2) The function of the Council is to provide recommendations to the Director on policy matters relating to fisheries conservation and management. The Council consists of the following members:

(3) The Council consists of the following members:

(a) 2 persons nominated by the fishing industry, 1 of which: (i) is a representative of the artisanal fisheries sector; and (ii) is a representative of the offshore fisheries sector;
(b) a person nominated by the Vanuatu Association of Non-Government Organisations with an interest in fisheries; and
(c) a person nominated by the Vanuatu Agriculture Bank; and
(d) a person nominated by the Vanuatu Investment Promotion Authority; and
(e) a person nominated by the Vanuatu International Shipping Registry; and
(f) the following office holders or their nominee, who are to serve in an ex officio capacity:
   (i) the Attorney General; and
   (ii) the Commander of the Police Maritime Wing; and
   (iii) the Director of the Department of Foreign Affairs; and
   (iv) the Director of the Department of Local Authorities; and
   (v) the Director of the Department of Finance; and
   (vi) the Director of the Department of Industry; and
   (vii) the Director of the Department of Cooperatives.

(4) The persons nominated under paragraphs (3)(a) to (e) are to be appointed by the Minister for a period of 4 years and may be reappointed.

(5) The Director may invite representatives of relevant international, regional or national organisations to attend specific meetings of the Council as observers.

(6) The Director is the Chairperson of the Council.

(7) If the Director is for some reason unable to attend a meeting, the person acting as Director is to Chair the meetings of the Council.

(8) The Council may establish subcommittees for specific fishing sectors under this Act, and may adopt rules to include objectives, membership, procedures and related matters to give effect to such subcommittees.

(9) The Council is to meet as often as may be necessary or expedient for the transaction of its business, and such meetings must be held at such places and times and on such days as the Director determines.

(10) The Council is to determine and regulate its own procedures.
